(1) **Cleaning Comparison Index** - This index is used in the comparison of pressure washing equipment by taking into account the cleaning effects of water pressure, flow, & temperature on cleaning time. The larger the cleaning comparison index the faster the pressure washer will clean. The formula is GPM x 60 x PSI x [1 + (TEMP - 32°)/310]. (2) **Fuel Consumption** - considers an operating duty cycle of 60%.
